                                                                                                                                                                                                                                                                                                                    for this supplied
                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer.

ABK44450-ABK46337 represent coding sequences of human colon tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-AUG-2000; 2000US-223283P

AB056306 to AB060787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the AB060776 to AB060787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polynucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample of cells from a patient. (I) is useful for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solld surface, to identify a chromosome on which the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid that is differentially expressed in tissues useful for determining the presence of colon cancer in or tissue type, and in antisense therapy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1094

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid molecule (I) com a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of t specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient (f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful

cc a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the cc specification or its complement. (I) is useful for:

CC (a) assessing whether a patient is afflicted with prostate cancer;

CC (b) monitoring the progression of prostate cancer in a patient;

CC (c) assessing the efficacy of a test compound to inhibit prostate

CC cancer in a patient;

CC (d) assessing the efficacy of a therapy for inhibiting prostate cancer

CC (a) assessing the efficacy of a therapy for inhibiting prostate cancer

CC (e) selecting a composition for inhibiting prostate cancer in a patient

CC (f) assessing the prostate cell carcinogenic potential of a compound:

CC (h) assessing the addressivence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a human eukaryotic initiation factor (cIF), designated heIF3), which is expressed in human dendritic cells. heIF3 has translation initiation factor activity. Also described in the present invention are methods for the preparation and detection of the heIF3 protein and nucleotide sequences. The present sequence encodes heIF3, as given in the present invention.
                                                                                                                                                                                                                                                                                                                        1401 GGCAAAACATTTGCAATGAAACAAAGTCTCACTAGGCATGCTTGTTGTACATGATCCTGAC 1342

                                                                                                                                                 Ş
                                                                                                                                                                                       멍
                                                                                                                                                                                                                        ρy
                                                                                                                                                                                                                                                                                                                                         cc polypeptide (II) sequences. (I) is useful as hybridisation probes, cc polypeptide (II) sequences. (II) is useful as hybridisation probes, and for chromosome cc palymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The cc polynucleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (I) is useful in gene therapy techniques cc (II). (II) is useful for generating antibodies against it, detecting or cquantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical call activity. (I and I are useful for treating cr inaging of sites expressing (II). (I) and (II) are useful for treating cd disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in calegoristics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and call and activity. The sequences AAS64197-AAS94564 represent novel human constitution, but was obtained in electronic format directly from WIPO are trained activity.

                                                                                                                                                                                                                                                                  The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer.
                                                                                                                                                                                                            proteins of the invention.

Note: With the exception of SEQ ID No 1 and 2, the sequence data for this pattent did not form part of the printed specification but supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-AUG-2000; 2000US-223283P

Sequence 44678, Application US/09724676A

GENERAL INFORMATION:
APPLICANT: Compugen LTD

TITLE OF INVENTION: Variants of alternative splicing
FILE REFERENCE: 129181.4 Compugen
CURRENT APPLICATION NUMBER: US/09/724,676A

CURRENT FILING DATE: 2000-11-28

NUMBER OF SEQ ID NOS: 97222

SOFTWARE: Patentin version 3.2

SEQ ID NO 44678

LENGTH: 2239

TYPE: DNA
ORGANISM: Homo Sapiens
